Children With Cerebral Palsy Archie Hinchcliffe 2007-02-21 A large number of children in developing countries are born with or develop cerebral palsy. The problem is made worse by inadequate knowledge and treatment facilities. As a result, thousands of children with cerebral palsy live in burdensome dependence upon their families. This book is a practical guide designed to help therapists and community workers understand and effectively treat children with cerebral palsy. It focuses on: - adequately assessing children with cerebral palsy - designing treatment programmes that can be carried out in partnership with parents and community workers - assessing and managing eating and drinking difficulties - making simple and cost-effective equipment - designing appropriate play activities during therapy - evaluating and dealing with sensory integration problems in children with cerebral palsy - closer integration of theory and practical skills.

Moving Ahead Joan O'Connor 1998-01-01 Vast numbers of children with motor disorders need rehabilitation. In response to the expressed needs of their care givers, this manual was compiled complete with a CD of songs. The text provides a practical, step by step guide to the activities of the daily routine for different levels of functional ability. Written in five parts, it aims to highlight the importance of the daily routine/programme in providing children with the optimum opportunity for training, practice and reinforcement when learning daily life skills. Part One discusses the early development of the normal child, in particular stressing the interrelationship of all aspects of the child's development including a structured learning environment. This is then turned to the viewpoint for the cerebral palsy child. Part Two then sets the groundwork for the actual implementation of the environment to teach the child all the skills to function in life. Having set these goals, Part Three takes the child step by step through the implementation process. Part Four deals with the task series, where the skills needed at the 4 different levels of position (lying, sitting, standing, and walking) are taught. Finally, Part Five scrutinises some problems that may arise from individual cases which require specific adaptations. The manual is directed at middle level rehabilitation workers, but doctors, nurses, therapists, teachers, parents, and nursery nurses will also find it useful in their daily practice.
