[Antique and Classic Model Planes Dr. Heinrich Eder](#) Antique and classic models are not "antiques", but replicas that are intended to remind us of the early, golden days of model aviation. The antique modelling scene has gained a lot of popularity over the last few years: Many model aviation enthusiasts no longer want to follow the path of ever larger models with their high-tech equipment. The rounded forms of the antique and classic models stand out from the modern technologically determined standard forms – and amaze younger people. The smell of fuel and varnish inspires some older model pilots and brings back forgotten memories of their youth. In addition to an introduction to antique and classic aeromodelling and a broad theoretical and practical knowledge, the book contains an extensive and impressive as well as illustrated collection of over 100 antique model portraits, which were taken at antique model meetings in Germany and nearby foreign countries. The author, Dr Heinrich Eder, has been active in the model aviation scene for almost seventy years. In the book, he gives an overview of building materials, stringing methods, and the design of the "antiques" – spanning from the past to the present. In addition, Eder addresses topics such as aerodynamics and the profile problems of vintage models as well as the typical drives from the compressed air engine to the carburettor diesel and gives important tips on installation. From the content: • Introduction to Antique and Classic Model Flying • Drives of antique models • Construction techniques and plans • Aerodynamics of antique models • Flight stability of antique models • Flight practice • Over 100 illustrated model portraits •

Improvement and upgrade of various printer models

[Rubber Powered Model Airplanes Don H. Ross 1988](#) This comprehensive manual covers rubber powered model airplanes from a beginner's simple trainer through gradually more complex designs, including winning scale and duration fliers. Even if you've never built a model, the simple line drawings and detailed photos give you the tools and techniques to build light, sturdy models that will surprise and delight you with their sustained flights. Some Important Topics Covered Include... -Plans for two all-sheet balsa models that can be built in hours and are capable of flights exceeding one minute indoors or out. -Plans for stick and tissue models that gradually introduce the builder to more complex projects. -Many techniques that can be used to simplify construction, add strength, and reduce weight. -Propeller construction and design simplified so every novice can build and even design contest winning props. -The secrets of flight trimming as the experts do it. -Numerous ideas on how to add terrific scale details. -The ABC's of how to design your own models including Canards, Bi-planes, and Flying Wings. It's all here...the models, materials, and methods. Learn how to work with the various materials and adhesives and how to choose the right ones for every type of model. This book shows you the difference between kits and "scratch building," and how to modify any kit for better endurance and appearance. Don started building models in 1942. His designs have appeared in magazines and his "Fledgling" classes have added scores of young and "retread" modelers to the active scene. Don specializes in "synthesizing" difficult technical information into simple, straightforward how-to basics that make experts out of rank beginners. Rubber Powered Model Airplanes takes the "mystery" out of building successful free flight models. Whether you're thinking of building a kit, or considering an original design; whether you build for fun or competition...this book's for you! "THE book I would recommend to anyone, of any age, starting out in free flight." -National Free Flight Digest "A tool to bring aeromodelling to the public." -Flying Models Magazine "Universal. Good value for the bookshelf." -Aero Modeller Magazine
